

The background of the image is black and populated with several stylized virus particles. There are approximately 10-12 particles in total. Some are red with yellow-orange protrusions, while others are grey with grey protrusions. They are scattered across the frame, with some appearing larger and more detailed than others. The central text is white and bold.

COVID-19

PANDEMIC GLOBAL

COVID-19

COVID-19 is a respiratory illness that spread through droplets that survive 2-3 hours on most surfaces and 2 days on metal and plastic.

It caused by a new virus that was first detected in China and has now been detected around the world including Canada.

The World Health Organization (WHO) is still learning about the virus and are working hard to control its spread and make sure our communities are prepared.
